WebMessenger

WebMessenger Mobile for Microsoft Office Communications Server (OCS) is now available for use on Nokia S60 3rd Edition devices, creating new opportunities for business collaboration among office-based and mobile professionals.

In the office, Microsoft OCS manages all real-time (synchronous) communications, including: instant messaging, VoIP, audio and video conferencing. Microsoft OCS also powers presence, a key benefit of Microsoft unified communications that unites all the contact information stored in Active Directory with the ways people communicate. Using WebMessenger Mobile for Microsoft OCS extends similar functionality of the office-based application to Nokia S60 devices, giving mobile professionals the same collaboration and productivity functionality in the field that they experience in the office.

Using WebMessenger Mobile for Microsoft OCS can also result in reduced operational expenses.

“Forum Nokia is happy to support WebMessenger’s global rollout of the OCS solution for Nokia S60 devices,” said Eric John, Director of Marketing, Forum Nokia. “It’s great to see a Forum Nokia PRO developer like WebMessenger advancing mobility and communications through their innovative solution.”

WebMessenger Mobile for Microsoft OCS on Nokia S60 devices can be used by itself or in conjunction with other WebMessenger Mobile solutions to bring together leading IM networks, connect with enterprise voice IP PBX platforms, extend persistent group chat solutions, or leverage existing auditing and compliance tracking solutions.

The price for WebMessenger Mobile for Microsoft OCS starts at \$72 per user. A free version of the product that can be used with all public IM networks is available at:
