

# S60 3<sup>rd</sup> Edition: How To Enable Backup And Restore For Installed C++ Applications

Version 1.0; November 23, 2005

## Overview

In S60 3<sup>rd</sup> Edition installed applications will not be backed up by default. If you are developing applications targeted for S60 3<sup>rd</sup> Edition, you will have to enable backup and restore for the application.

This concerns only S60 3<sup>rd</sup> Edition and onwards.

## Detailed Description

Applications will not be backed up by default in S60 3<sup>rd</sup> Edition. Do as follows if you want the application to be backed up and restored:

- Create an XML backup registration file named `backup_registration.xml`.

```
<?xml version="1.0" standalone="yes" ?>
<backup_registration>
  <system_backup />
  <restore requires_reboot="no" />
</backup_registration>
```

- Include the `backup_registration.xml` into your project's `.pkg` file.

```
"backup_registration.xml"-"!:\private\98765432\backup_registration.xml"
```

**Note:** If you place the registration file into the application's private data area, it is protected on the device.

## Summary

Create an xml file and include it in the application's project `.pkg` file.
