HAVA Mobile Player

Monsoon Multimedia calls their HAVA Mobile Player a TV "place shifting" application. This does not mean you will need to play musical chairs at home in order to watch your favorite TV programs. Instead, the HAVA Player lets you watch live TV shows – or other recorded content – from your home television on your S60 device. Sounds good, right? It gets better. By using your device's 3G or WLAN connection, you can then watch those shows anywhere that you happen to be. You can take all of your favorite shows with you and watch them on the go.

To use this place-shifting technology, you first purchase and install on your home TV a HAVA box from Monsoon Multimedia. Then you install the free HAVA Player software on your S60. And then, you can begin to enjoy any of the shows you would watch at home, but this time from anywhere you have high-speed Internet connectivity on your mobile device.

The HAVA Player features a built-in onscreen remote control that allows you to change channels, browse your program guide, schedule or view recordings, buy Videos on Demand, or anything you could do with the "clicker" at home.

Monsoon also offers a free version of HAVA Player for the Nokia N810 and N800 Internet Tablets, which works with the WLAN or WiMAX connection of the device, or even over Bluetooth technology when paired to a 3G or 3.5G-enabled Nokia smartphone.

Return to the Application of the Week main page for download information about the HAVA Mobile Player software, or visit their Web site at: www.myhava.com
