

# Forum Nokia Design and Paper Prototyping Templates

These templates are designed to be printed on standard A4 paper. Use them in the following ways—or invent your own uses.

**Note:** Templates and components are included for Nokia touch devices (based on a 360 pixels by 640 pixels display), and non-touch devices (based on a 240 pixels by 320 pixels display). Device screens and components are not 100% size and have been scaled to accommodate printing on A4 paper.

## 1. Wireframing and conceptual design

Project: \_\_\_\_\_ Author: \_\_\_\_\_ Version: \_\_\_\_\_ Page: \_\_\_\_\_

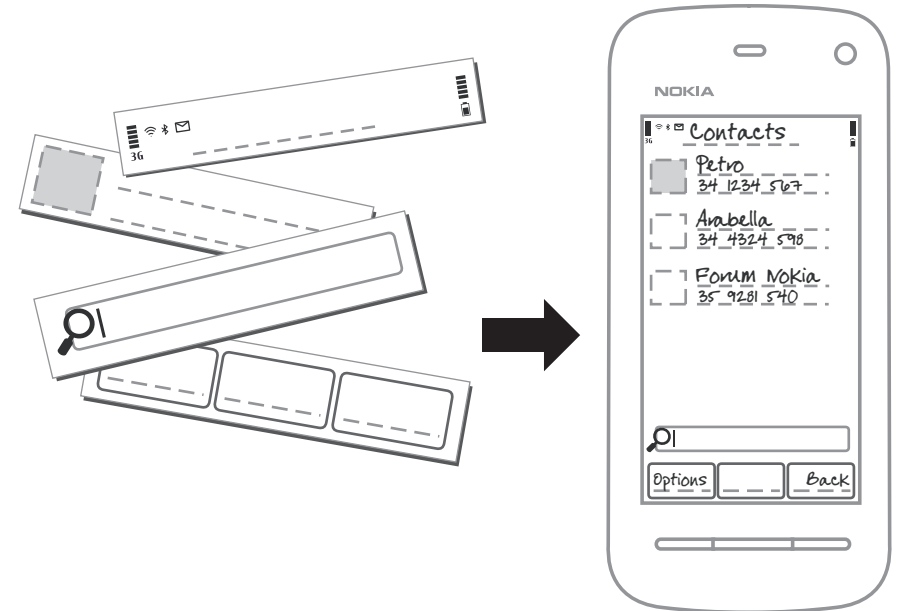

*This is the CO2 tracking view, it shows your CO2 usage*

*The Ovi maps API will come in handy over here*

The sketching templates include portrait and landscape device views and are ideal to create quick conceptual sketches or simple pencil-sketch wireframes.

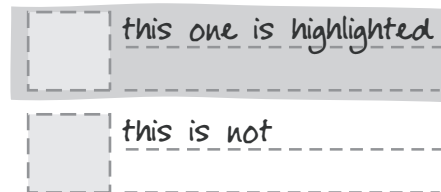

## 2. Paper prototyping

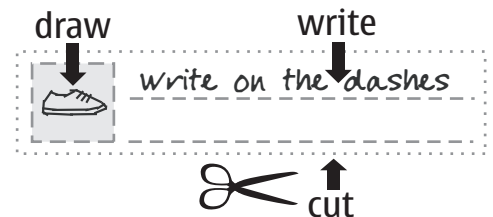

Print and cut out the template components, then stick them onto a device template to build paper prototypes.

### TIPS

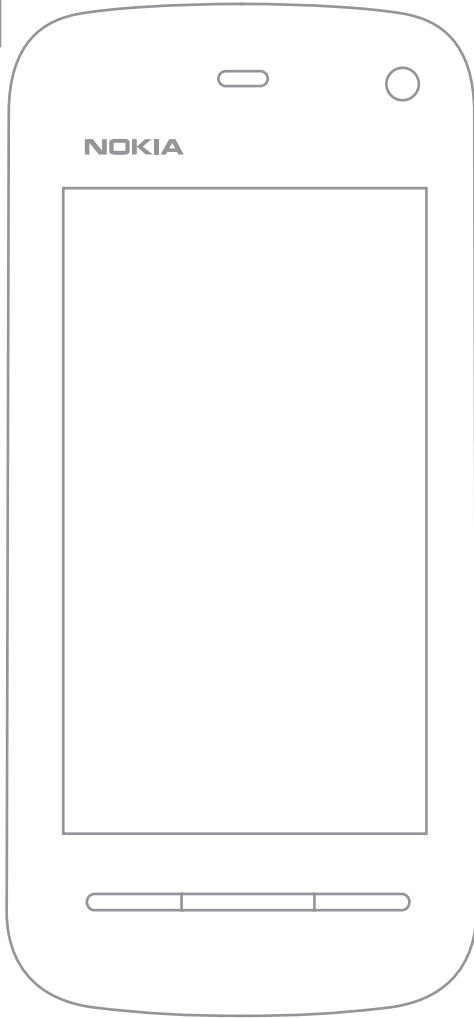

Use a coloured marker to indicate which user interface components are highlighted or have focus.

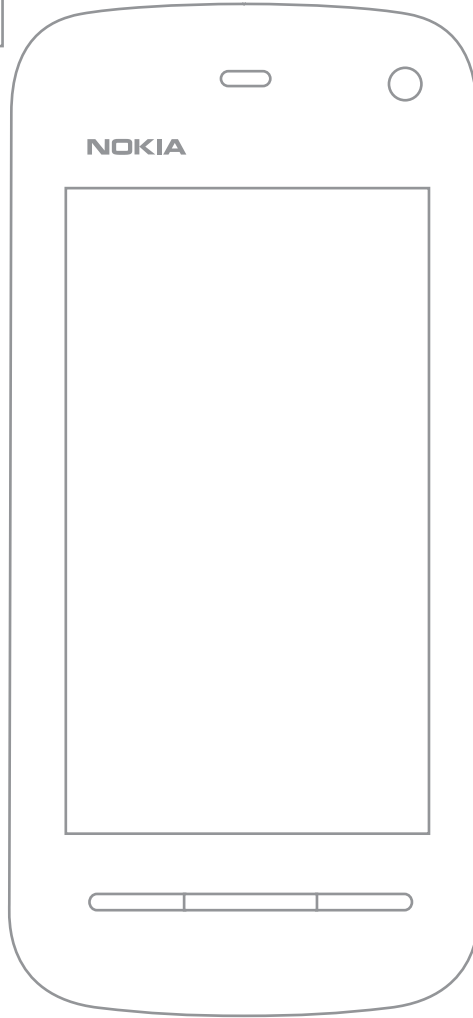

Draw in the boxes.  
Write on the dashes.  
Cut on the dotted lines.  
If there's no dotted line, cut wherever you'd like.
